- **Languages**: JavaScript, TypeScript, HTML, CSS, SQL, GraphQL
- **Frameworks**: ReactJS, NextJS, Laravel, SCSS, Zustand, SCSS
- **Tools**: VSCode, Jira, Git, Google Cloud Platform (GCP)

WORK EXPERIENCE

noon.com   **July 2023 – present**
Software Development Engineer 2

- Engineered and launched the noon ONE subscription plan select interface, directly enabling users to select multiple plans on the web.
- Spearheaded the migration of the platform's address and loyalty (noon ONE) sections to React Server Components in Next.js, improving SEO performance and reducing initial page load times for critical user flows.
- Shipped a new mobile web payment integration with STC (Saudi Telecom Company), enabling direct carrier billing to capture a wider customer segment and streamline the checkout process.

iTelaSoft   **June 2021 – July 2023**
Software Engineer

- Played an instrumental role in building the new Gigaclear public website from scratch as a core developer on the project using NextJS and Graphql.
- Revamped the customer-facing website by building a library of visually appealing, reusable components, resulting in a more engaging and intuitive user experience.
- Collaborated directly with the marketing team to translate business requirements into technical solutions, addressing key UX issues which contributed to improved customer interaction and satisfaction metrics.

iTelaSoft   **July 2019 – July 2020**
Trainee Software Engineer

- Developed and deployed key interactive components for the Effi mortgage broker platform using Vue.js, and Vuex (for state management).
- Contributed to building a user-friendly application that streamlined the client mortgage management process, enhancing broker efficiency and reducing manual data entry.

EDUCATION

Kingston University, London
Master of Science, Data Science

University of Westminster, London
Bachelor of Engineering, Software Engineering
